## Executive Summary

In 2022, Nichols Consulting Engineers, Chtd. (NCE) was selected by the Metropolitan Transportation Commission (MTC) to update the City of Alameda's (City) pavement management program (PMP) as part of the Pavement Management Technical Assistance Program, Round 23 (P-TAP 23). This report summarizes the results of the 2022 update and its purpose to help educate policy makers about the current condition of the street network and the impact of various funding scenarios on future network condition.

The City of Alameda is responsible for maintaining approximately 127.4 centerline miles of pavement which represents a substantial investment of approximately \$439 million. In 2022 NCE collected pavement condition data throughout the network using Metropolitan Transportation Commission (MTC) modified ASTM survey procedures. The survey data were entered into StreetSaver<sup>®</sup>, which the City uses as a decision-support tool.

Overall, the City's pavement network is currently in "Fair" condition with an average pavement condition index (PCI) of 68. Approximately 52.7 percent of the network is in "Good" condition and 22.7 percent is in "Poor" or "Failed" conditions.

The budget needs analysis indicated that the City needs to spend \$78.3 million over the next five years to bring the street network to a condition that can be maintained with on-going preventive maintenance in the most cost-effective way. Four alternative budget scenarios were performed to illustrate the impacts of different funding levels. The following table lists each scenario with its corresponding five-year budget, and the PCI and deferred maintenance at the end of the analysis period.

Scenario	Description	5-Year Budget (\$M)	2027 PCI	2027 Deferred Maintenance (\$M)
1	Funding of \$4 Million per year	20.0	66	92.1
2	Funding of \$5 Million per Year	25.0	67	86.5
3	Maintain PCI at 68	30.9	68	80.9
4	Increase PCI to 73	50.1	73	60.1

NCE recommends that the City pursue Scenario 4, which will increase the network PCI to 73 in five years. This scenario will also increase the portion of the network in "Good" condition and decrease the deferred maintenance. It will require \$50.1 million over the next five years.

Quality Management Report

## 1 Introduction and Background

In 2022, Nichols Consulting Engineers, Chtd. (NCE) was selected by the Metropolitan Transportation Commission (MTC) to update the City of Alameda's (City) pavement management program (PMP) as part of the Pavement Management Technical Assistance Program, Round 23 (P-TAP 23). In general, PMPs are "designed to provide objective information and useful data for analysis so that... managers can make more consistent, cost effective, and defensible decisions related to the preservation of a pavement network."<sup>1</sup>

To update City's PMP, NCE performed pavement condition surveys using the Metropolitan Transportation Commission (MTC) modified<sup>2</sup> ASTM D6433<sup>3</sup> survey procedures. The surveys did not include non-pavement issues such as traffic, safety and road hazards, geometric issues, shoulders, sidewalks, curb and gutters, drainage issues, or immediate maintenance needs.

After inspection, all survey data were entered into the City's StreetSaver<sup>®</sup> database, and pavement condition index (PCI) calculations were performed. NCE then met with agency representatives and reviewed and updated the City's decision tree including maintenance and rehabilitation (M&R) strategies and treatment unit costs. A budget needs analysis was then performed, and three budget scenarios were analyzed for the street network.

This report answers the following questions for the City of Alameda:

- What does the City's pavement network include?
- What is the current condition of the pavement network?
- What are the City's current M&R strategies?
- How much funding is required to perform all needed M&R treatments over the next five years?
- What effect with the City's existing funding have on the network condition and overall deferred maintenance?
- What effect will other funding levels have on the network condition and deferred maintenance?

## 2 Network Summary

The City is responsible for maintaining approximately 127.4 centerline miles of streets (or 726 management sections). Table 1 summarizes the City's street network by functional class. The network is primarily composed of asphalt concrete (AC) pavement with three Portland cement concrete (PCC) pavement sections. The database also holds two streets with brick surfaces as well as 62 streets in Alameda Point that are not maintained by the City. Although the brick sections and the Alameda Point sections are housed in the database, they were not included in the subsequent condition averages or scenario analyses.

**Table 1. Network Summary Statistics**

Functional Class	Number of Sections	Centerline Miles	Lane Miles	Network Area (%)
Arterial	119	28.8	80.6	26.8
Collector	109	27.2	59.3	23.1
Residential/Local	497	71.1	142.8	49.9
Other (Encinal Boat Ramp Road)	1	0.3	0.7	0.2
<b>Total</b>	<b>726</b>	<b>127.4</b>	<b>283.4</b>	<b>100.0</b>
Brick Sections	2	0.1	0.1	N/A
Alameda Point	62	12.6	25.4	N/A

**The street network replacement cost is estimated to be approximately \$439 million.** This can be viewed as the value of the pavement network and is the amount needed to fund a reconstruction of the entire paved network. It does not include related infrastructure assets such as sidewalks, signals, markings, signs, or storm drains.

### 3 Pavement Condition

Pavement condition is typically quantified using the pavement condition index (PCI), which ranges from 100 (best) to 0 (worst). Pavement condition is affected by the environment, traffic loads and volumes, construction materials, and age. Figure 1 shows examples of streets with varying PCIs.

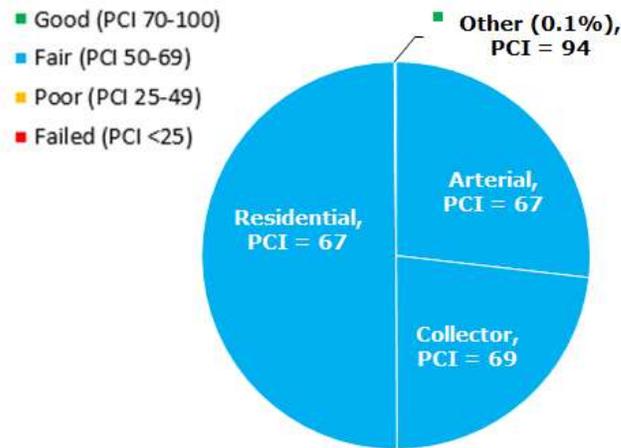

The PCI scale is divided into four general condition categories. Pavements in "Good" condition have a PCI above 70, pavements in "Fair" condition have a PCI between 50 and 69, pavements in "Poor" condition have a PCI between 25 and 49, and finally pavements in "Failed" condition have a PCI below 25.

**Figure 1. Examples of Streets with Different PCIs**

A list of all sections in the network along with their attributes, including the PCI at the time of last inspection, is provided in Appendix A. For convenience, two versions are provided – one sorted alphabetically by street name and the other sorted by descending PCI. Appendix G includes the quality management report (QMR) which is the list of sections selected for reinspection as well as the original and reinspected PCIs.

**The current average PCI for the City’s network is 68.** This value is an area-weighted calculation performed in StreetSaver® and is based on the condition survey performed in 2022. Figure 2 breaks down the current network PCI by functional classification. The collectors have the highest average pavement condition, (second to the other functional classification, which represents the Encinal boat ramp) with an average PCI of 69. The average condition for the arterials and residential are similar with PCIs of 67.

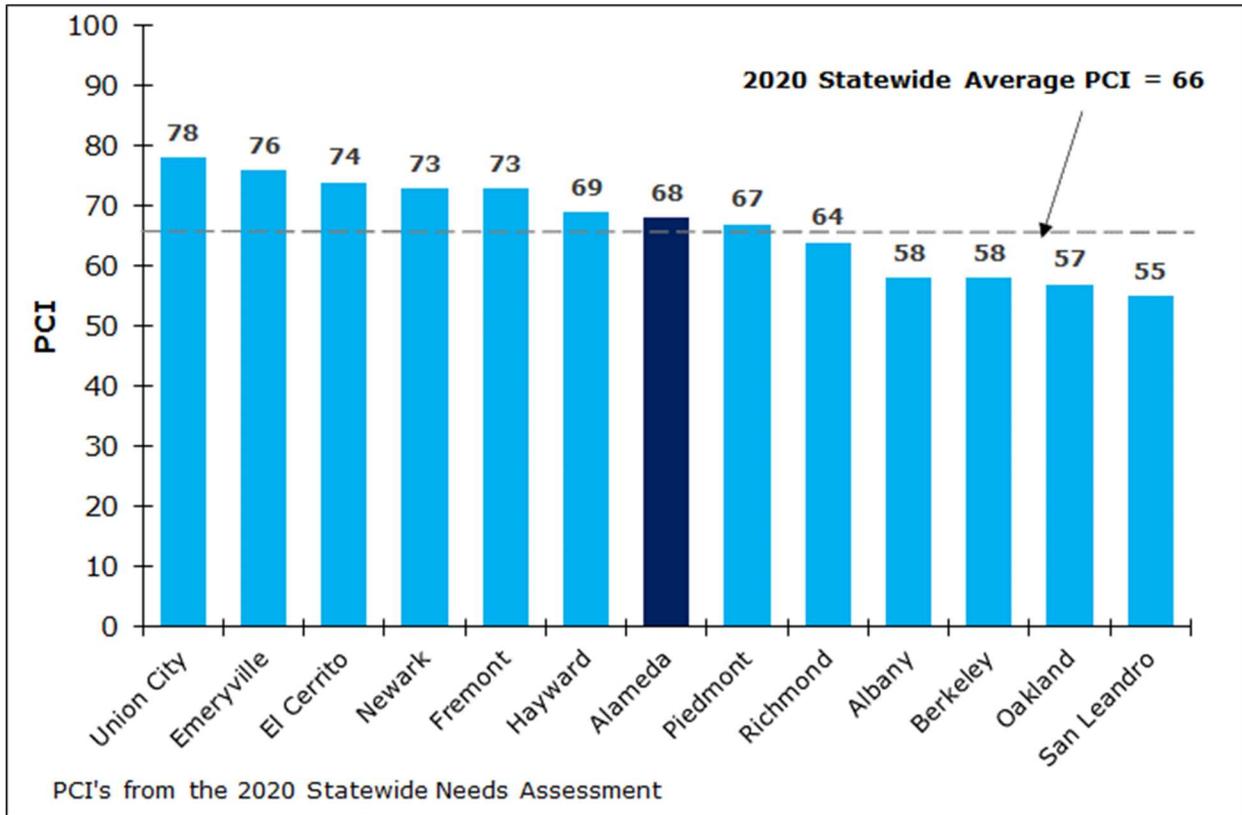

**Figure 2. Network Condition Breakdown by Functional Classification**

Table 2 summarizes the street network by condition category and functional classification. More than half of the network is in “Good” condition, approximately a quarter is in “Fair condition, and less than a quarter is in “Poor” or “Failed” conditions.

**Table 2. Pavement Condition Breakdown by Functional Class**

Condition Category	PCI Range	Arterials (%)	Collectors	Residentials (%)	Others (%)	Entire Network (%)
<b>Good</b>	70-100	14.5	12.5	25.5	0.2	52.7
<b>Fair</b>	50-69	5.7	6.4	12.5	0.0	24.6
<b>Poor</b>	25-49	4.8	4.1	7.9	0.0	16.8
<b>Failed</b>	<25	1.8	0.1	4.0	0.0	5.9
<b>Total</b>	-	<b>26.8</b>	<b>23.1</b>	<b>49.9</b>	<b>0.2</b>	<b>100.0</b>

Figure 3 shows the City’s average network PCI compared to neighboring agencies as well as the statewide average PCI from the 2020 California Statewide Local Streets and Roads Needs Assessment<sup>4</sup>. As illustrated, the City’s network PCI is among the midst of its neighboring agencies and is two points greater than the 2020 statewide average.

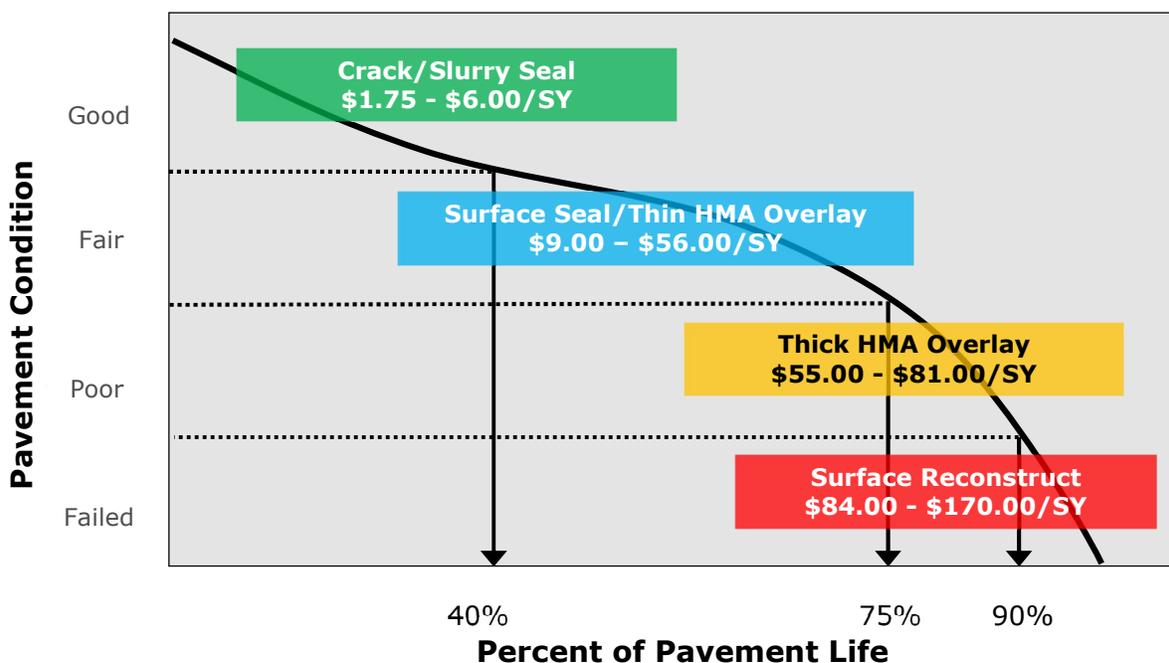

**Figure 3. Comparison of City’s Network PCI to Neighboring Agencies**

<sup>4</sup> “California Statewide Local Streets and Roads Needs Assessment 2022 Update”. Nichols Consulting Engineers, Chtd., CA, 2020.

## 4 Maintenance and Rehabilitation Strategies

The City’s current M&R strategies include cost-effective preventive treatments. In general, crack and slurry seals will be applied to pavements in “Good” condition; pavements in “Fair” condition will receive a slurry seal, microsurfacing, or thin hot mix asphalt (HMA) overlay; pavements in “Poor” condition will receive thicker mill and HMA overlay; and finally, pavements in “Failed” condition will receive a surface reconstruction. The City’s M&R strategies are formalized into a decision tree<sup>5</sup> (presented in Appendix B), which is instrumental in performing the budget needs analysis and budget scenarios.

Experience and research have shown that it costs much less to maintain pavement in good condition than to repair pavement that has already failed. As shown in Figure 5, by allowing pavements to deteriorate, streets that once cost \$6.00/square yard (SY) to seal may soon cost \$81.00/SY to overlay, or \$170.00/SY to surface reconstruct. In other words, delaying repairs can significantly increase repair costs. Note, the City can slurry seal 28 lane miles of pavement for the same cost as one lane mile of surface reconstruction.

**Figure 4. Costs of Maintaining Residential Pavements Over Time**

<sup>5</sup> Note: The StreetSaver® “Maintenance and Rehabilitation Decision Tree” divides the “Fair” condition category to separate pavements with primarily non-load-related distresses (e.g., longitudinal cracking) from those with load-related distresses (e.g., alligator cracking).

## 5 Budget Analyses

Based on the principle that it costs less to maintain streets in good condition than it does to repair those that have failed, cost-effective PMPs employ strategies that eliminate the deferred maintenance<sup>6</sup> and then maintain the network with on-going preventive maintenance. Such strategies bring the network condition to an optimal PCI that can be maintained over time.

The first step in developing such a cost-effective strategy is to determine the total maintenance budget needs of the network. The next step is to conduct alternative budget scenario analyses. In consultation with the City, four funding scenarios were selected for analysis and performed using StreetSaver®.

- **Scenario 1: Funding of \$4 Million per Year**– This scenario assumes the City will spend \$4.0 million per year on pavement M&R for the next five years.
- **Scenario 2: Funding of \$5 million per Year** – This scenario assumes the City will spend \$5.0 million per year on pavement M&R for the next five years.
- **Scenario 3: Maintain PCI** – This scenario aims to maintain the existing network PCI of 68 over the next five years.
- **Scenario 4: Improve PCI** – This scenario aims to improve the network PCI to 73 over the next five years.

The budget needs analysis and budget scenarios are presented in the following subsections. The detailed results of the budget needs analysis are provided in Appendix C. The detailed results of the budget scenarios are provided in Appendix D. Additionally, maps illustrating the current pavement condition and the projected 2027 pavement condition for each scenario are provided in Appendix E.

---

<sup>6</sup> Deferred maintenance is M&R not performed due to insufficient funding.

### BUDGET NEEDS ANALYSIS

The total budget needs for the network represents the cost associated with performing M&R treatments at the optimal time – optimal meaning the PCI is maximized and the cost is minimized – over the analysis period. This was done by performing a budget needs analysis in StreetSaver® with an inflation rate of four percent for an analysis period of five years.

The budget need analysis employs a front-loaded budget strategy, which addresses all the deferred maintenance<sup>7</sup> in the first year and maintains the deferred maintenance at zero throughout the analysis period. As shown in Table 3, the total budget needs for the City for the next five years is estimated to be \$78.3 million. Of the total budget needs, approximately \$7.1 million (9.1 percent) is devoted to preventive maintenance, while the rest is allocated for more costly rehabilitation and reconstruction treatments. The network treated PCI resulting from this ideal strategy, will immediately increase and then stabilize to the low 80's. Alternatively, the untreated PCI, which will result if no maintenance is performed over the next five years, will drop to 59 by 2027.

**Table 3. Summary Results for Budget Needs Analysis**

Year	2023	2024	2025	2026	2027	Total
Budget Needs (\$M)	70.3	2.0	3.5	1.8	0.7	78.3
Treated PCI	88	85	84	83	81	NA
Untreated PCI	68	66	63	61	59	NA

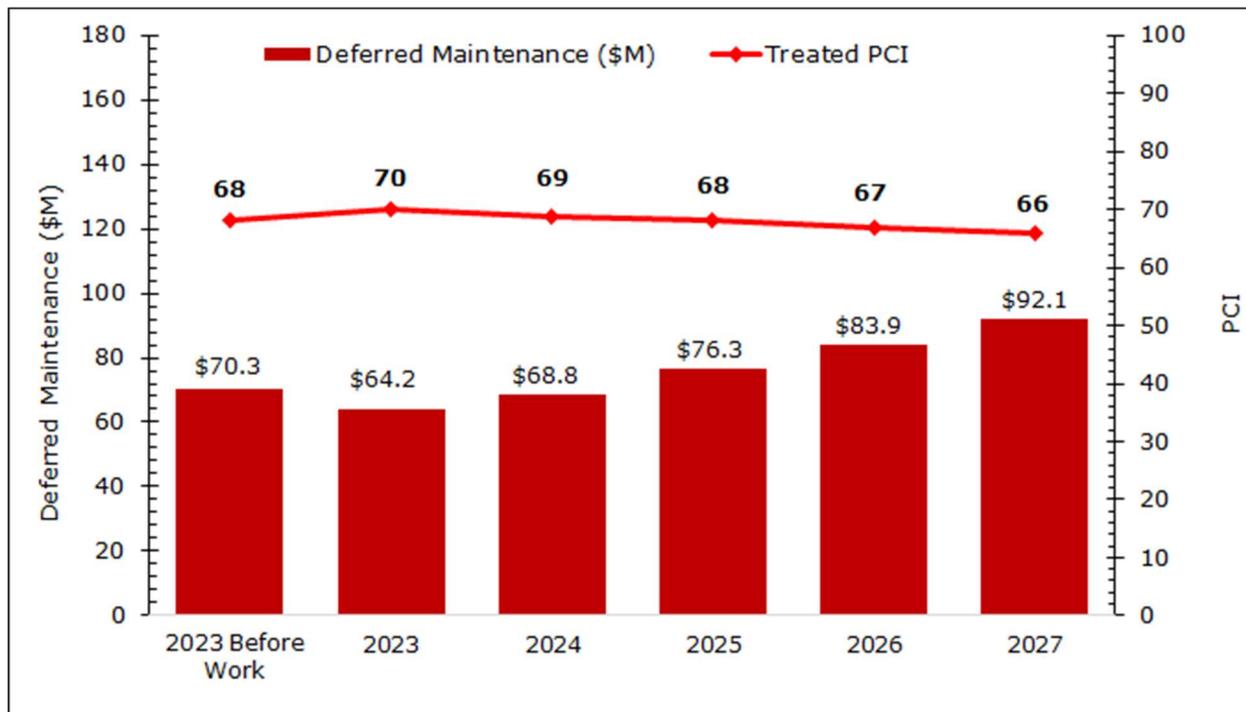

<sup>7</sup> Note: The budget needs for the first year of the analysis represents the City's current deferred maintenance value.

**SCENARIO 1: FUNDING OF \$4 MILLION PER YEAR (\$20M/5 YEARS)**

This scenario assumes the City will spend \$4 million per year on pavement M&R for the next five years. This value is in addition to the funding required to complete the upcoming 2023 reconstruction projects planned for Central Avenue and Grand Street. As shown in Table 4 and Figure 5, the network PCI will decrease to 66 and the deferred maintenance will increase to \$92.1 million by 2027. The portion of the network in “Good” condition will increase to 61.8 percent while the portion of network in “Failed” condition will increase to 12.6 percent. A list of candidate sections selected for treatment are provided in Appendix F.

**Table 4. Summary Results for Scenario 1**

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	4.0	4.0	4.0	4.0	4.0	20.0
Deferred Maintenance (\$M)	64.2	68.8	76.3	83.9	92.1	NA
Treated PCI	70	69	68	67	66	NA

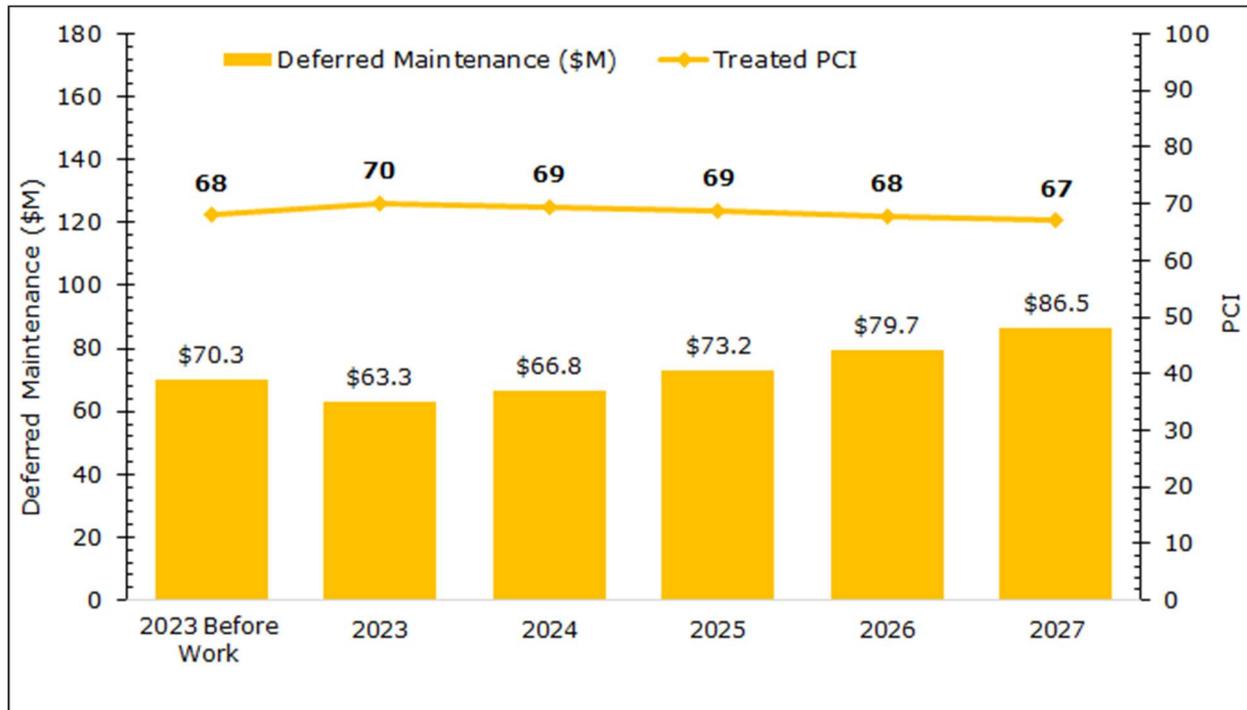

**Figure 5. PCI vs Deferred Maintenance for Scenario 1**

**SCENARIO 2: FUNDING OF \$5 MILLION PER YEAR (\$25M/5 YEARS)**

This scenario assumes the City will have a funding level of \$5 million per year for the pavement M&R for the next five years. Similar to Scenario 1, this value is in addition to the funding required to complete the upcoming 2023 reconstruction projects planned for Central Avenue and Grand Street. As shown in Table 4 and Figure 5, the network PCI will decrease to 67 and the deferred maintenance will increase to \$86.5 million by 2027. The portion of the network in “Good” condition will increase to 63.8 percent while the portion of network in “Failed” condition will increase to 12.5 percent (similar to Scenario 1).

**Table 5. Summary Results for Scenario 2**

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	5.0	5.0	5.0	5.0	5.0	25.0
Deferred Maintenance (\$M)	63.3	66.8	73.2	79.7	86.5	NA
Treated PCI	70	69	69	68	67	NA

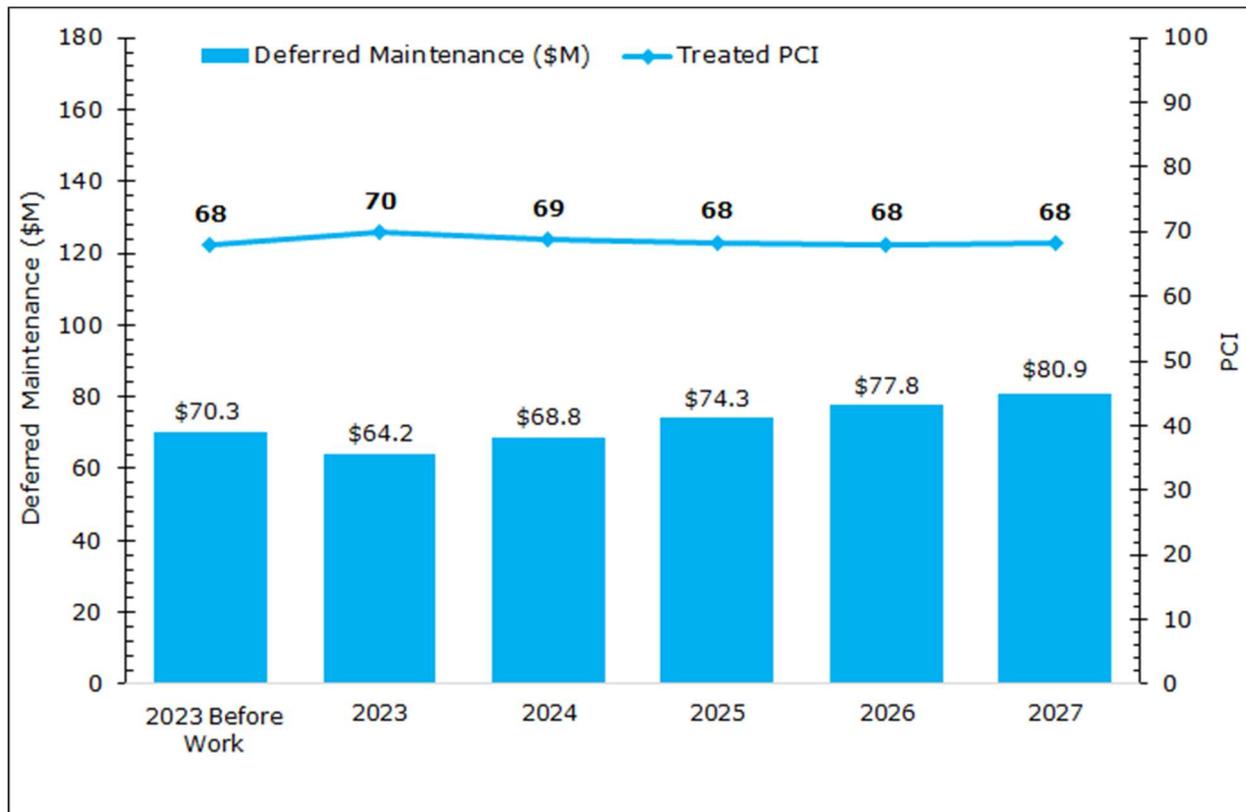

**Figure 6. PCI vs Deferred Maintenance for Scenario 2**

**SCENARIO 3: MAINTAIN PCI AT 68 (\$30.9M/5 YEARS)**

This scenario aims to maintain the existing network PCI at 68 over the next 5 years. As shown in Table 6 and Figure 7, the financial commitment required to accomplish this goal is \$30.9 million over five years. This value is in addition to the funding required to complete the upcoming 2023 reconstruction projects planned for Central Avenue and Grand Street. This scenario will result in 66.4 percent of the network being in “Good” condition with 11.7 percent in “Failed” condition. The deferred maintenance will increase to \$80.9 million by 2027.

**Table 6. Summary Results for Scenario 3**

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	4.0	4.0	6.0	8.0	8.9	30.9
Deferred Maintenance (\$M)	64.2	68.8	74.3	77.8	80.9	NA
Treated PCI	70	69	68	68	68	NA

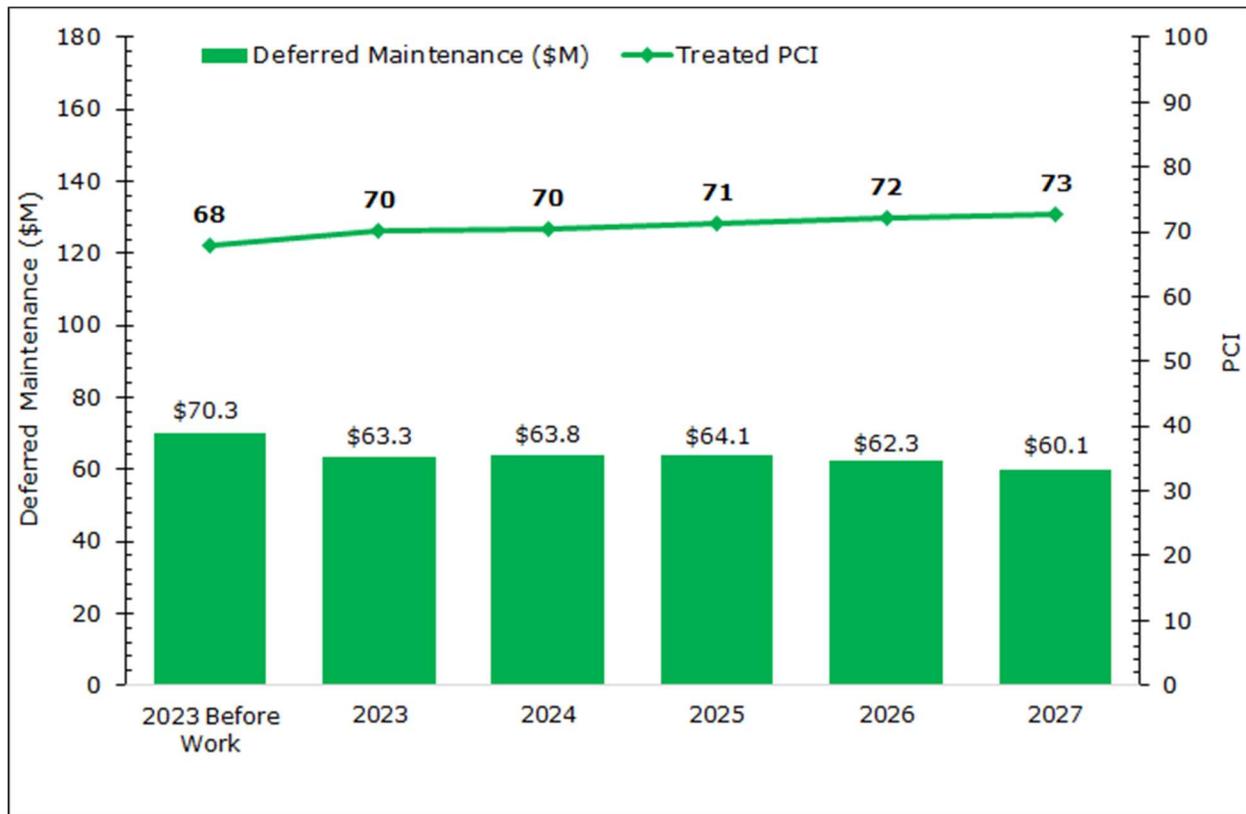

**Figure 7. PCI vs Deferred Maintenance for Scenario 3**

**SCENARIO 4: IMPROVE PCI TO 73 (\$50.1M/5 YEARS)**

This scenario aims to improve the network PCI to 73 by 2027. As shown in Table 7 and Figure 8, the financial commitment required for this goal is \$50.1 million over five years. This value is in addition to the funding required to complete the upcoming 2023 reconstruction projects planned for Central Avenue and Grand Street. This scenario will result in 73.1 percent of the network being “Good” condition with less than 8.9 percent in “Failed” condition. The deferred maintenance will decrease to \$60.1 million by 2027.

**Table 7. Summary Results for Scenario 4**

Year	2023	2024	2025	2026	2027	Total
Budget (\$M)	5.0	7.9	11.0	13.0	13.2	50.1
Deferred Maintenance (\$M)	63.3	63.8	64.1	62.3	60.1	NA
Treated PCI	70	70	71	72	73	NA

**Figure 8. PCI vs Deferred Maintenance for Scenario 4**

SCENARIO COMPARISONS

Figure 9 graphically compares the annual changes in PCI for each of the four scenarios. As previously noted, the average network PCI will decrease to 66 and 67 in Scenarios 1 and 2, respectively, be maintained at 68 in Scenario 3, and increase to 73 in Scenario 4.

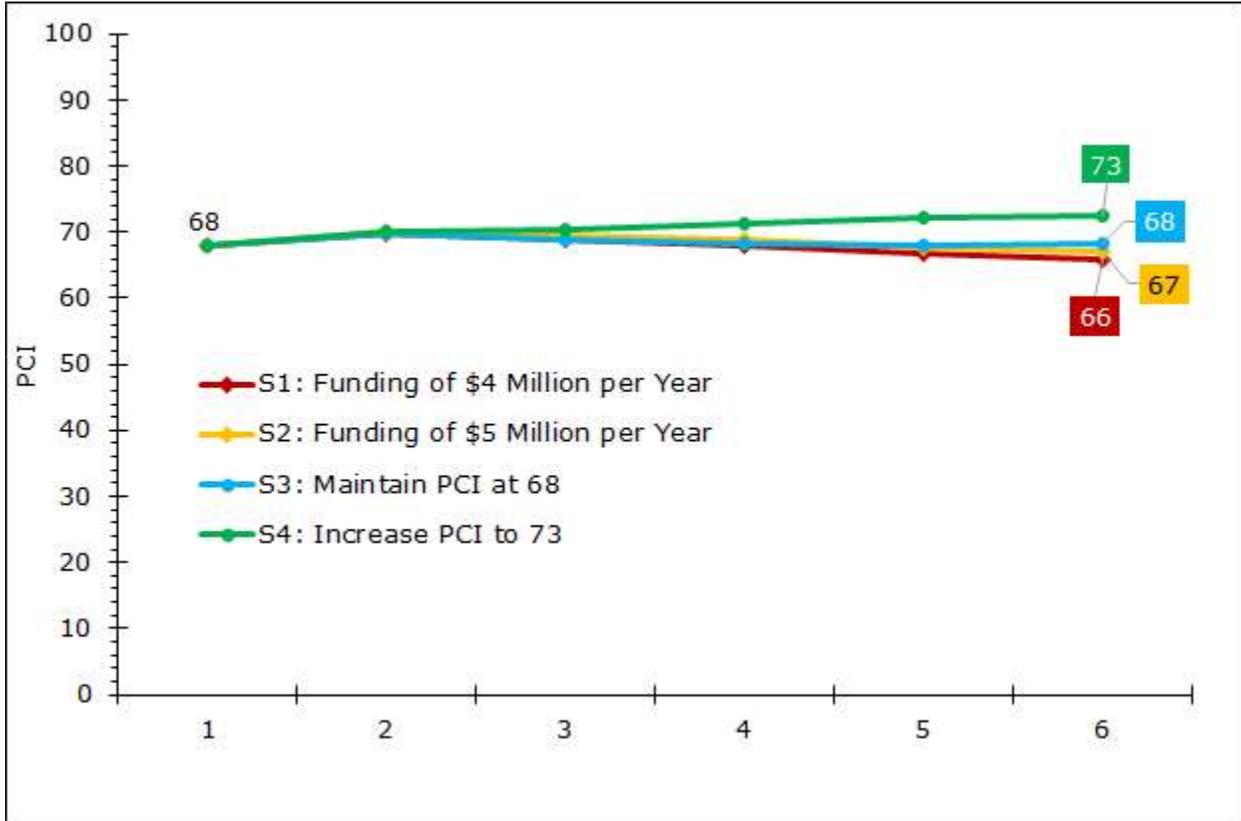

Figure 9. Comparison of Annual PCI by Scenario

Figure 10 illustrates the changes in deferred maintenance over time for each scenario. For Scenarios 1 and 2, the deferred maintenance will increase by approximately a third and a quarter, respectively to \$92.1 and \$86.5 million. In Scenario 3, the deferred maintenance will increase to \$80.9 million. In Scenario 4, the deferred maintenance will decrease to \$60.1 million by 2027.

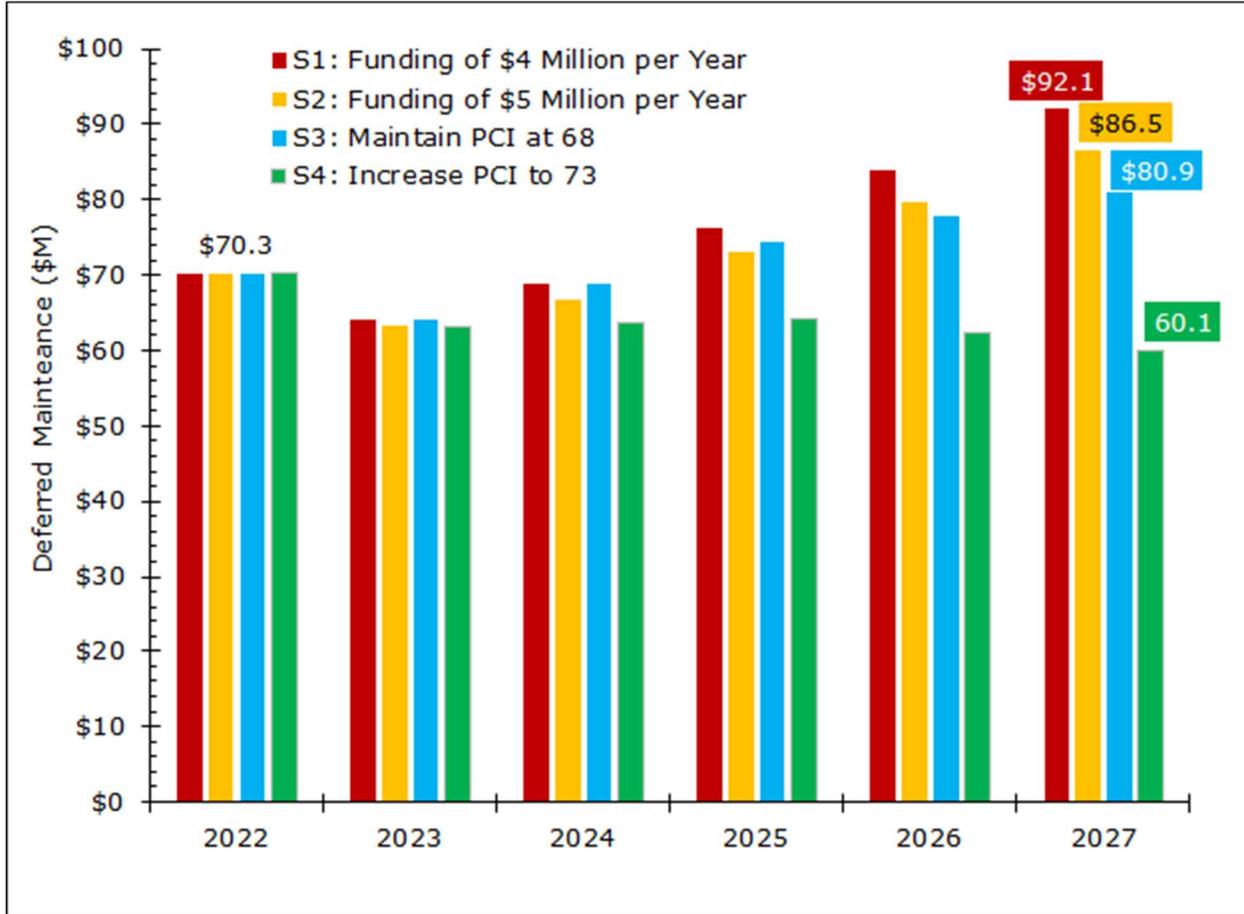

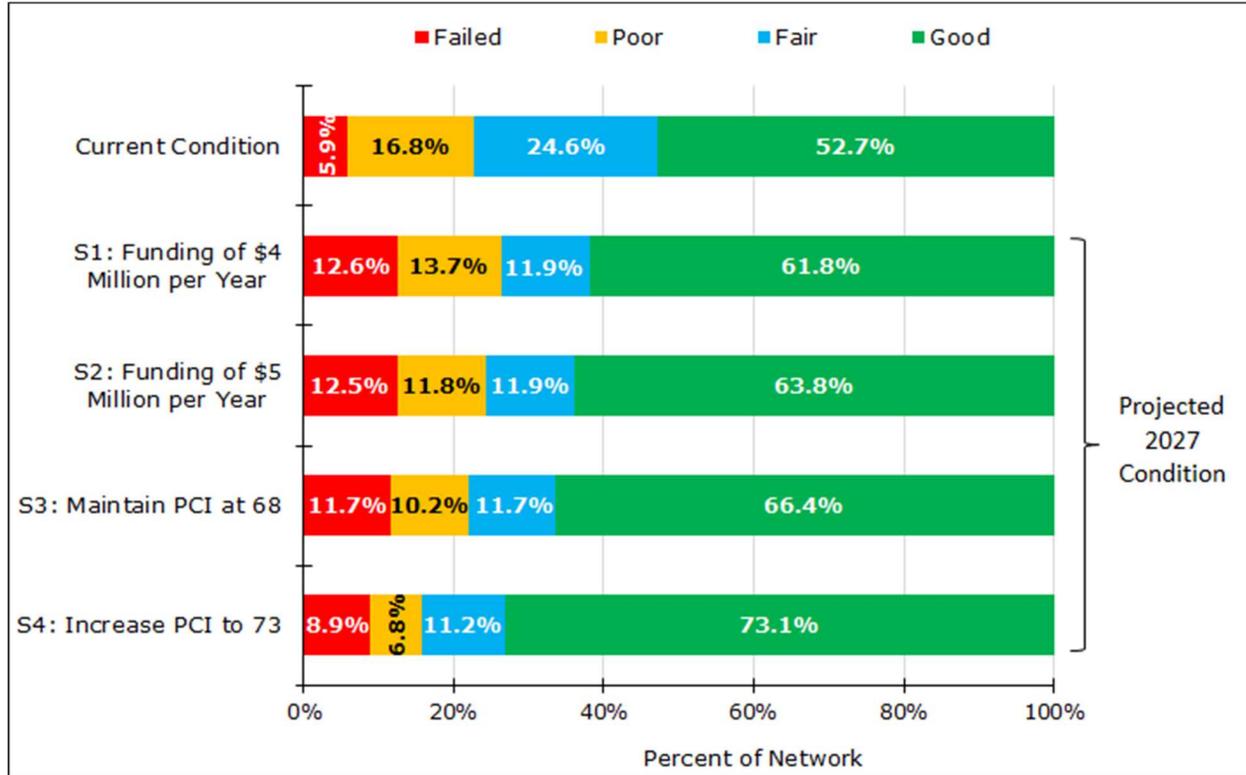

Figure 10. Comparison of Annual Deferred Maintenance by Scenario

Figure 11 illustrates the percent change in pavement condition for each scenario. As noted earlier, currently approximately more than half of the network is in “Good” condition with less than one quarter in “Fair” condition and 22.7 percent in “Poor” and “Failed” conditions. For all the four scenarios, the portion of the network in “Good” and “Failed” conditions will increase while the “Poor” and “Fair” portions of the network will decrease.

**Figure 11. Comparison of Pavement Condition Breakdown by Scenario**

## 6 Conclusion and Recommendations

In summary, the City of Alameda has a substantial investment of \$439 million in the pavement network. Overall, the City's streets are in "Fair" condition with a 2022 average network PCI of 68. Approximately 52.7 percent of the street network is in "Good" condition and 22.7 percent is in "Poor" or "Failed" conditions.

The analyses indicate that the City needs to spend approximately \$78.3 million on maintenance and rehabilitation over the next five years to essentially repair all pavement sections, thus bringing the network into a condition that can be maintained with on-going preventive maintenance. In the long run, this strategy will save the City money by preventing future pavement deterioration to levels requiring rehabilitation or reconstruction.

Based on the data collected and the scenarios analyzed and presented in this report, NCE offers the following recommendations.

1. **Funding** - The primary goal of PMPs should be to offer users a safe and functional pavement network without unduly increasing the maintenance burden in the future. With that in mind, the recommended scenario for the City is Scenario 4, which requires approximately \$50.1 million over the next five years. This budget allocation will increase the overall network PCI to 73, increase the portion of the network in "Good" condition, and decrease the deferred maintenance significantly.

To address the gap between the City's existing funding and the recommended scenario, NCE recommends the City pursue additional funding sources. Potential sources include:

### Federal Funding Sources

- American Rescue Plan Act (ARPA)
- Community Development Block Grants (CDBG)
- Congestion Mitigation and Air Quality Improvement Program (CMAQ)
- Federal Emergency Management Agency (FEMA)
- Highway Safety Improvement Program (HSIP)
- Bipartisan Infrastructure Investment and Jobs Act (IIJA)
- Regional Surface Transportation Program (RSTP)
- Surface Transportation Program (STP)
- Secure Rural Schools and Community Self-Determination Act

### State Funding Sources

- Active Transportation Program (ATP), which now includes the Bicycle Transportation Account (BTA) and Safe Routes to Schools (SR2S)
- AB 2766 (vehicle surcharge)
- CalRecycle grants

- State Transportation Improvement Program (STIP)
- State Water Resource Control Board
- Transportation Development Act (TDA)
- Traffic Safety Fund
- Transportation Uniform Mitigation Fee (TUMF)
- Vehicle License Fees (VLF)

#### Local/Regional Funding Sources

- MTC PTAP (Pavement Management Technical Assistance Program)
  - Development impact fees
  - Enterprise Funds (solid waste and water) MTC PTAP (Pavement Management Technical Assistance Program)
  - Flood Control Districts
  - General funds
  - Local sales tax measures
  - OBAG (One Bay Area Grant Program)
  - Parcel/property taxes
  - Solid waste funds
  - Traffic impact fees
  - Traffic safety/circulation fees
  - Transportation mitigation fees
  - Transient Occupancy Taxes (TOT)
  - Underground impact fees
  - Utilities (e.g., stormwater, water, wastewater enterprise funds)
  - Various assessment districts (lighting, maintenance, flood control, community facilities)
  - Vehicle registration fees
  - Vehicle code fines
2. **Pavement Management Strategies** – Since a significant portion of the City’s streets are currently in “Good” condition (52.7 percent), it is important to maintain that condition to the extent possible. Preservation occurs when streets with PCIs higher than 70 receive treatments such as surface seals (slurry, microsurfacing, etc.). Seals are relatively inexpensive treatments that prevent moisture ingress and thus preserve the integrity of the underlying base material. NCE recommends that the City balance preventive maintenance with rehabilitation and reconstruction projects to preserve pavements in “Good” condition, improve pavements in “Poor” condition, and avoid increasing the deferred maintenance.
3. **Reinspection Strategies** – In order to make appropriate management decisions based on current data, NCE recommends that the City perform condition inspections on arterials and collectors every 2 years and on

residentially at least every 4 to 5 years. This also ensures that the City remains compliant with MTC requirements for certification and funding. Additionally, since StreetSaver® and other prediction models do not yet take into account the effect of specialized materials such as asphalt-binders with rubber or polymers, the actual performance of City pavements may not be fully captured in the analysis models. For this additional reason, NCE recommends regular pavement condition surveys to ensure model accuracy and relevance.

4. **M&R Decision Tree** – Considering the recent volatility in oil prices and curb ramp requirements, the future cost of construction is unknown and unpredictable. NCE therefore recommends that the City annually review and update the M&R treatment strategies and associated unit costs to reflect current construction techniques and changing costs. This will ensure that the results for the budget analyses are reliable and as accurate as possible.

## Appendix A

---

### SECTION DESCRIPTION INVENTORY

## Section Description Inventory Report

This report lists a variety of section description information for each of the City's pavement sections. It lists the street and section identifiers, limits, functional class, surface type, number of lanes, length, width, area, Inspected PCI, and PCI date.

All of the City's pavement sections are included in the report. Two versions of the report are provided. The first is sorted alphabetically by Street Name and Section ID and the second report is sorted by descending PCI. The field descriptions in this report are listed below:

<b>COLUMN</b>	<b>DESCRIPTION</b>
Street ID	Street Identification - A code up to ten characters/digits to identify the street. Generally, the street name is truncated to six characters. The Street ID should be unique for each street.
Section ID	Section Identification - A code up to ten characters/digits to identify the section number. The Section ID must be unique for each section of one street.
Street Name	Street Name - The name of the street as indicated by street signs in the field.
Begin Location	Beginning limit of the section.
End Location	Ending limit of the section.
No. of Lanes	Number of travel lanes.
Functional Class (FC)	Functional Classification - A = Arterial, C = Collector, NCR = Non-City Road, O = Other, R = Residential
Length (ft)	Length of the section in feet.
Width (ft)	Average width of the section in feet.
Area (sf)	Area of section in square feet.
Surface Type (ST)	Surface Type - A = AC Pavement, AC/AC = Asphalt Concrete Overlay, PCC = Portland Cement Concrete, BRICK = Brick
PCI Date	The last inspection date or rehabilitation date.
PCI	Average PCI for the section. The value is based on the last inspection.

### MAINTENANCE AND REHABILITATION DECISION TREE

## Maintenance and Rehabilitation (M&R) Decision Tree

This report presents the current maintenance and rehabilitation decision tree that exists in the database. The decision tree forms the basis for all of the budgetary computations included in this report. ***Changes to the decision tree will make the results in the budget reports invalid.*** All pavement treatment unit costs relevant to the road types in the database were updated.

The decision tree lists the treatments and costs selected for preventive maintenance and rehabilitation activities. Each line represents a specific combination of functional classification and surface type.

The preventive maintenance portion of the report is identified as Condition Category I – Very Good. All preventive maintenance treatment listings are assigned only to sections in Condition Category I where the PCI  $\geq$  70. Sections with PCI values less than 70 are assigned to treatments listed in Categories II through V.

In the preventive maintenance category (PCI  $\geq$  70), a time sequence is used to identify the appropriate treatment and cost. Each preventive maintenance treatment description consists of three parts: 1) a CRACK treatment, 2) a SURFACE treatment, and 3) a RESTORATION treatment. These three parts allow the user to specify one of three different preventive maintenance treatments depending on the prior maintenance history of the section.

1. The CRACK treatment part can be used to specify the most frequent type of preventive maintenance activity planned (typically crack seals).
2. The SURFACE treatment part can be used to specify more extensive and less frequent preventive maintenance activities, such as chip seals or slurry seals. For example, a crack seal can be specified on a 3-year cycle with a slurry seal specified after 5 years.
3. The RESTORATION part can be used to specify a surface restoration treatment (such as an overlay) to be performed after a specified number of surface treatments. For example, after a certain number of successive slurry seals, an overlay can be specified instead of another slurry seal.

Rehabilitation treatments are assigned to sections in Condition Categories II through V (PCI less than 70). Each line is defined by a specific combination of functional classification, surface type, and condition category.

COLUMN	DESCRIPTION
Functional Class	Functional Classification identifying the branch
Surface	Surface Type identifying the branch number.
Condition Category	Condition Category (I through V).
Treatment Type	First Row (Crack Treatment) indicates localized treatment (e.g., crack sealing). Second Row (Surface Treatment) indicates surface treatment (e.g., slurry sealing). Third Row (Restoration Treatment) indicates surface restoration (e.g., overlay).
Treatment	Name of treatments from the "Treatment Descriptions" report.
Yrs. Between Crack Seals	First Row - number of years between successive treatment applications specified in the first row (i.e., CRACK treatment).
Yrs. Between Surface Seals	Second Row - number of years between successive treatment applications specified in the second row (i.e., SURFACE treatment).
Number of Sequential Seals	Number of times that the treatment application in the second row (i.e., SURFACE treatment) will be performed prior to performing the treatment application in the third row.

Note that the treatments assigned to each section should not be blindly followed in preparing a road maintenance program. Engineering judgment and project level analysis should be applied to ensure that the treatment is appropriate and cost effective for the section.

### BUDGET NEED ANALYSIS RESULTS

## Budget Needs Reports

The purpose of this section is to answer the question: *If the City had all the money in the world, what sections should be fixed and how much will it cost?* Based on the Maintenance & Rehabilitation (M&R) decision tree and the PCIs of the sections, the program will then select a maintenance or rehabilitation action and compute the total costs over a period of five years. The Budget Needs represents the "ideal world" funding levels, while the Budget Scenario reports in the next section represent the most "cost effective" prioritization possible for the actual funding levels.

A budget needs analysis has been performed. The summary results from the analysis are shown below. An interest rate of 4% and an inflation factor of 4% were used to project the costs for the next five years. This report shows the total five-year budget that would be required to meet the City's standards as exemplified in the M&R decision tree.

Budget Needs reports included in this appendix are listed below:

- Projected PCI/Cost Summary
- Preventive Maintenance Treatment/Cost Summary
- Rehabilitation Treatment/Cost Summary

## Needs - Projected PCI/Cost Summary

This report summarizes and projects the network PCI over the five-year analysis period, both with and without treatments applied. It also reports the associated costs, which are based on the treatment unit costs presented in the M&R decision tree.

<b>COLUMN</b>	<b>DESCRIPTION</b>
Year	Year in the analysis period.
PCI Treated	Projected network average PCI with all needed treatments applied.
PCI Untreated	Projected network average PCI without any treatments applied.
PM Cost	Total preventive maintenance treatment cost.
Rehab Cost	Total rehabilitation treatment cost.
Cost	The budget required for each year in the analysis period to meet the City's standard as shown on the M&R decision tree.
Total Cost	Total budget required over a five-year period.

# Needs - Projected PCI/Cost Summary

Interest: 4.00%

Inflation: 4.00%

Printed: 12/29/2022

Year	PCI Treated	PCI Untreated	PM Cost	Rehab Cost	Cost

2024	85	66	\$677,318	\$1,319,039	\$1,996,357
2025	84	63	\$568,393	\$2,896,614	\$3,465,007
2026	83	61	\$1,762,143	\$0	\$1,762,143
2027	81	59	\$705,387	\$0	\$705,387
		% PM	PM Total Cost	Rehab Total Cost	Total Cost
		9.08%	\$7,102,298	\$71,154,410	\$78,256,709

## Needs - Preventive Maintenance Treatment/Cost Summary

This report summarizes each preventive maintenance treatment type, quantity of pavement affected, and total costs over the analysis period. It also summarizes the total quantities and costs over the next five years.

<b>COLUMN</b>	<b>DESCRIPTION</b>
Treatment	Type of preventive maintenance treatments needed.
Year	Year in the analysis period (i.e., 2023, 2024, 2025, etc.).
Area Treated	Quantities in linear feet (Seal Cracks) or square yard (Slurry Seal).
Cost	Maintenance treatment cost.

## Needs - Preventive Maintenance Treatment/Cost Summary

Interest: 4.00%

Inflation: 4.00%

Printed:

### PAVEMENT CONDITION MAPS

## **Current Network Condition - 2023**

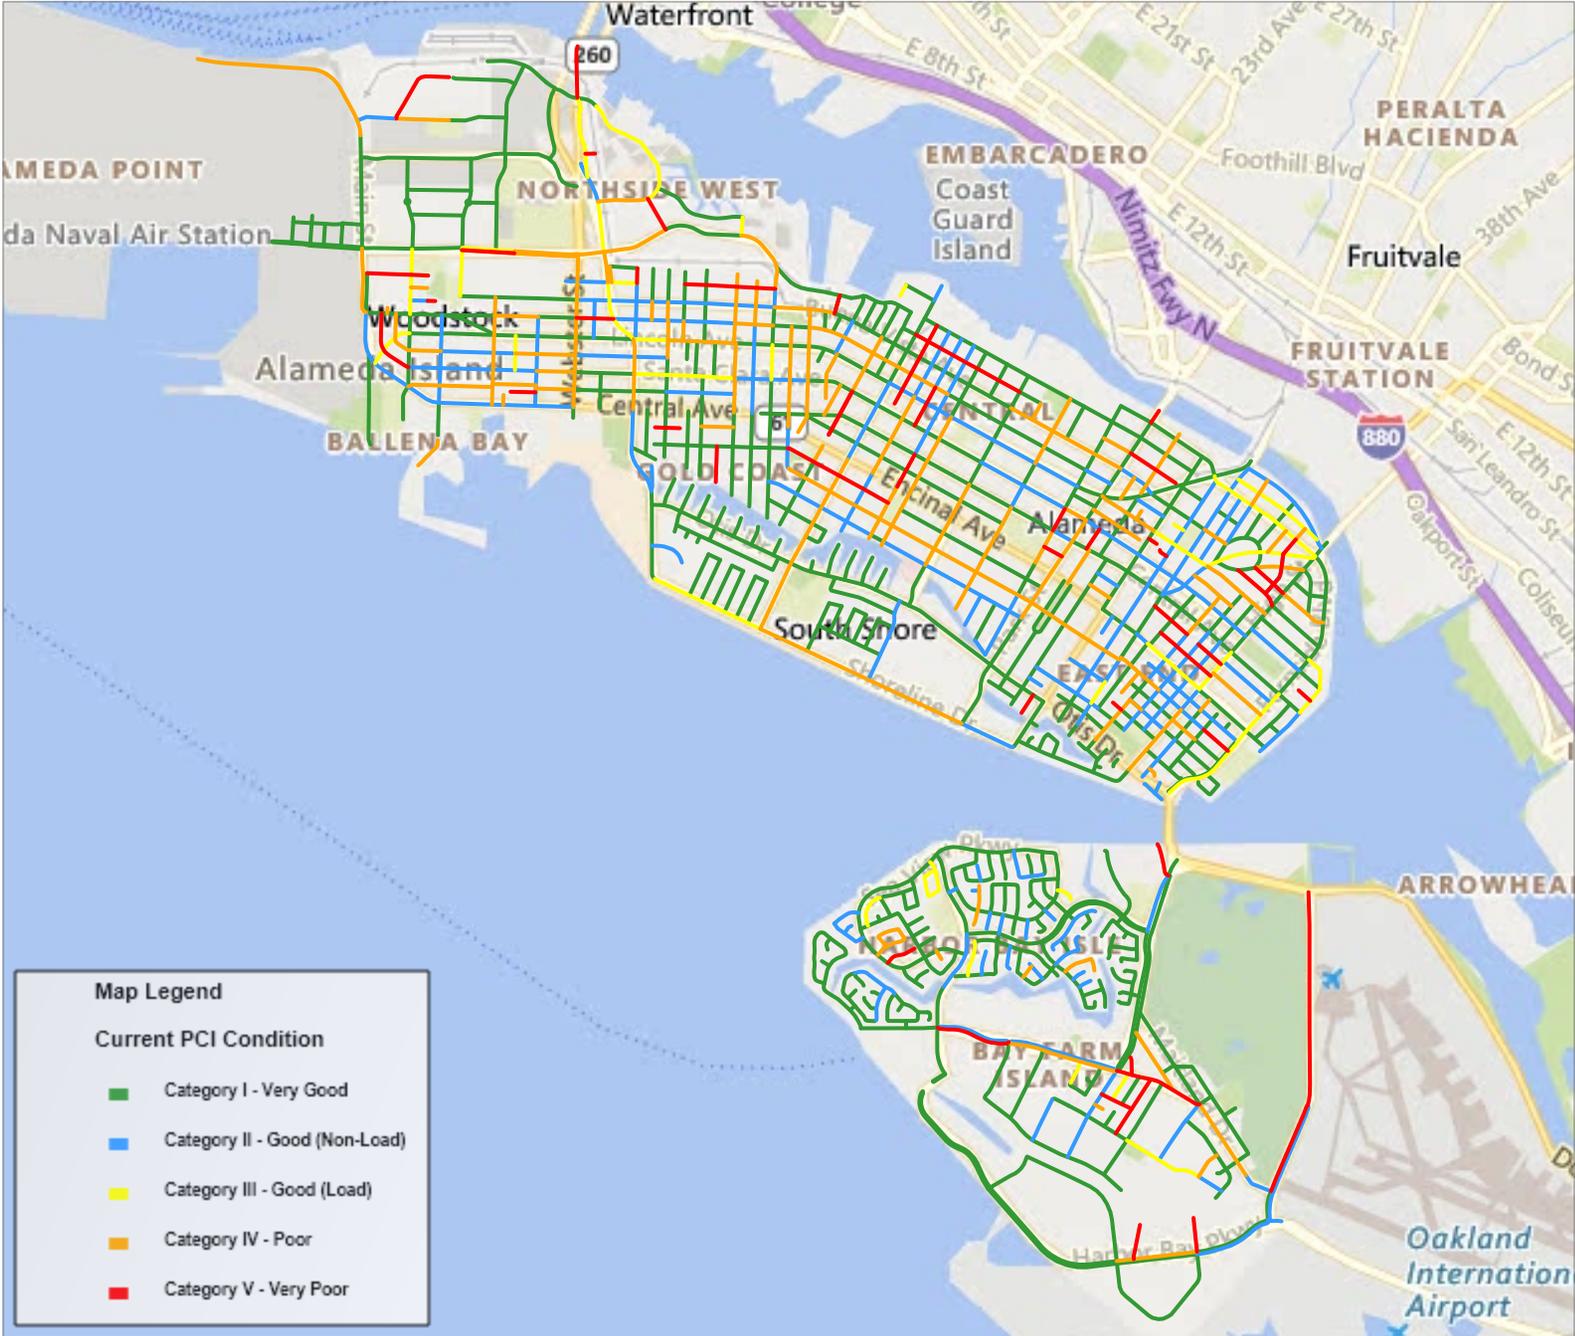

City of Alameda Public Works Dept., Alan Ta  
 950 W Mall Sq, Room 110  
 Alameda, CA 94501  
 (510) 747-7946

# Current PCI Condition

Printed: 1/25/2023

**Feature Legend**

- Category I - Very Good
- Category II - Good (Non-Load)
- Category III - Good (Load)
- Category IV - Poor
- Category V - Very Poor

**Scenario 1: Funding of \$4 Million per Year**  
Projected Street Network Condition - 2027

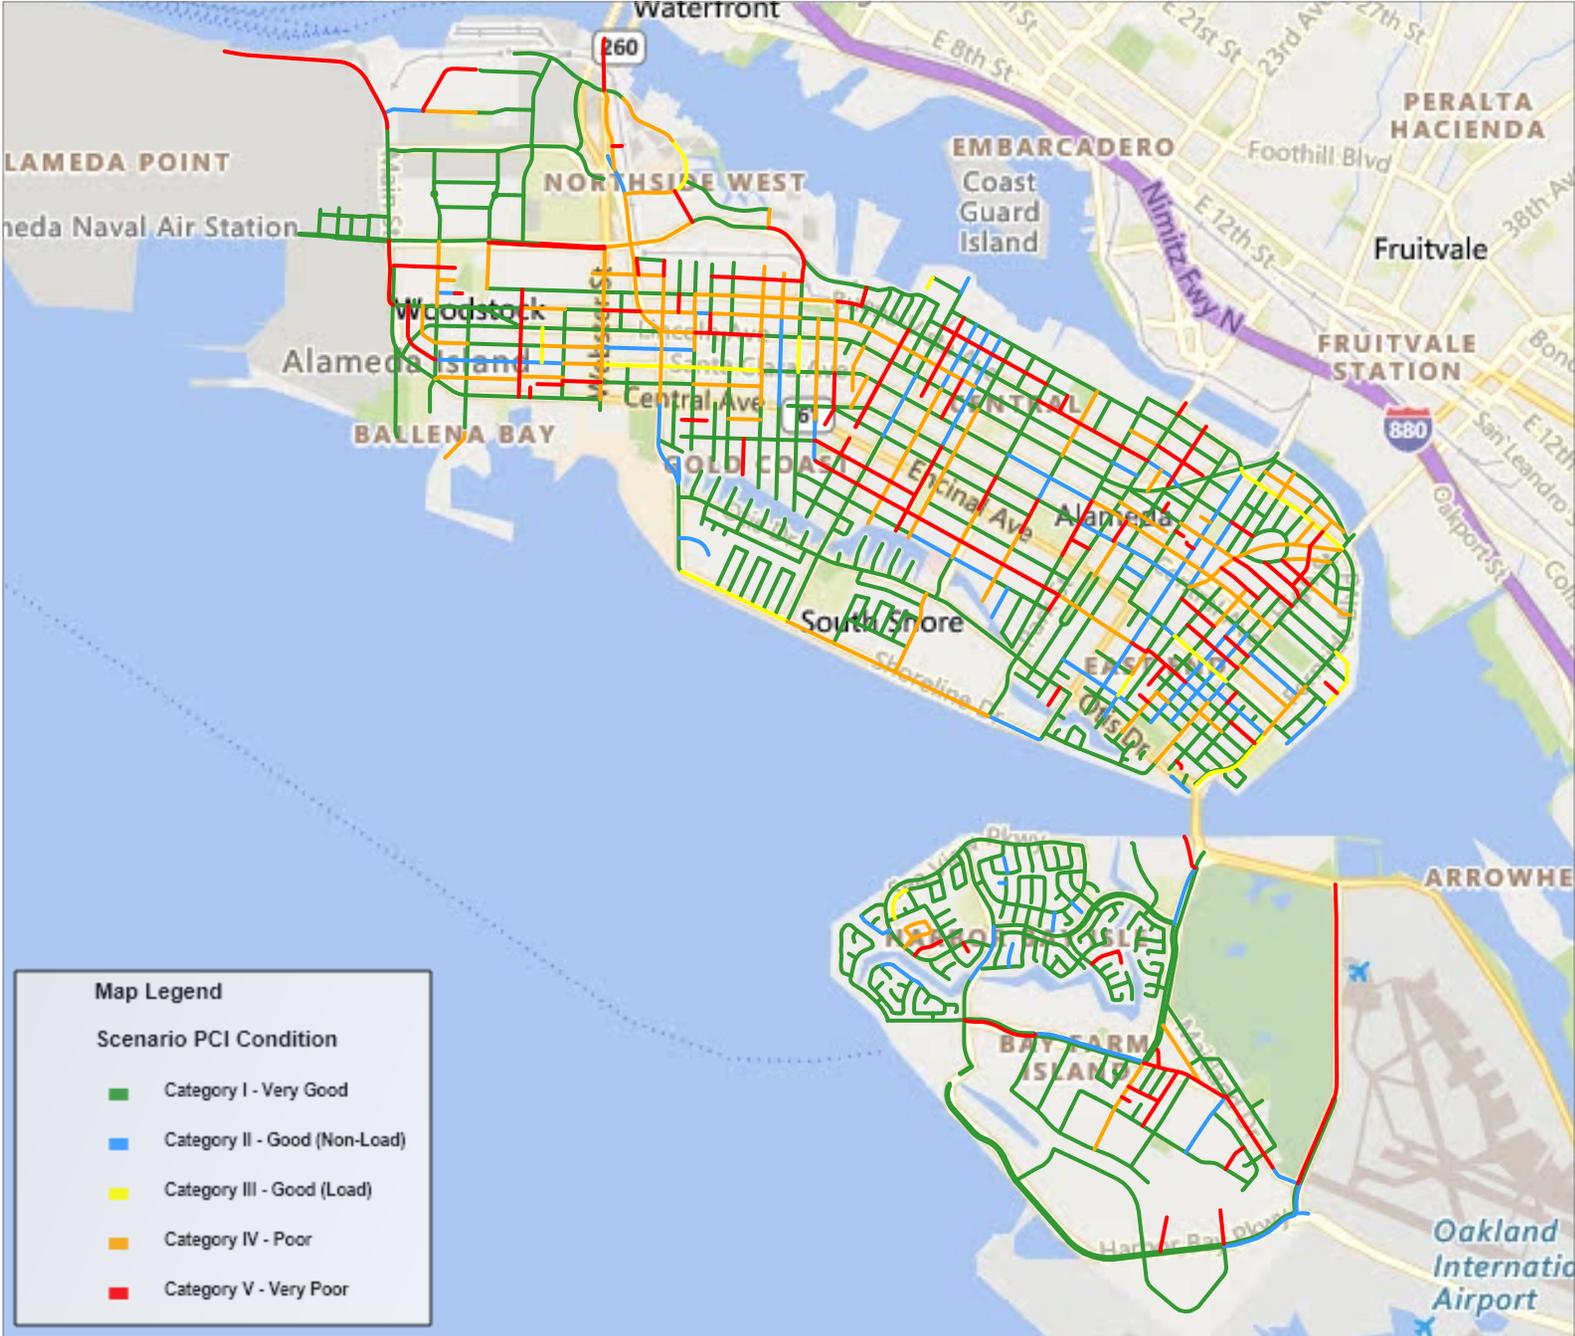

City of Alameda Public Works Dept., Alan Ta  
 950 W Mall Sq, Room 110  
 Alameda, CA 94501  
 (510) 747-7946

# Scenario PCI Condition

PTAP-23 - Scenario 1 - Existing Budget - \$4.0 M/YR - 2027 Project Period - Total Rehab for 2027: \$2,927,327 - Printed: 1/25/2023

**Feature Legend**

- Category I - Very Good
- Category II - Good (Non-Load)
- Category III - Good (Load)
- Category IV - Poor
- Category V - Very Poor

**Scenario 2: Funding of \$5 Million per Year**  
Projected Street Network Condition - 2027

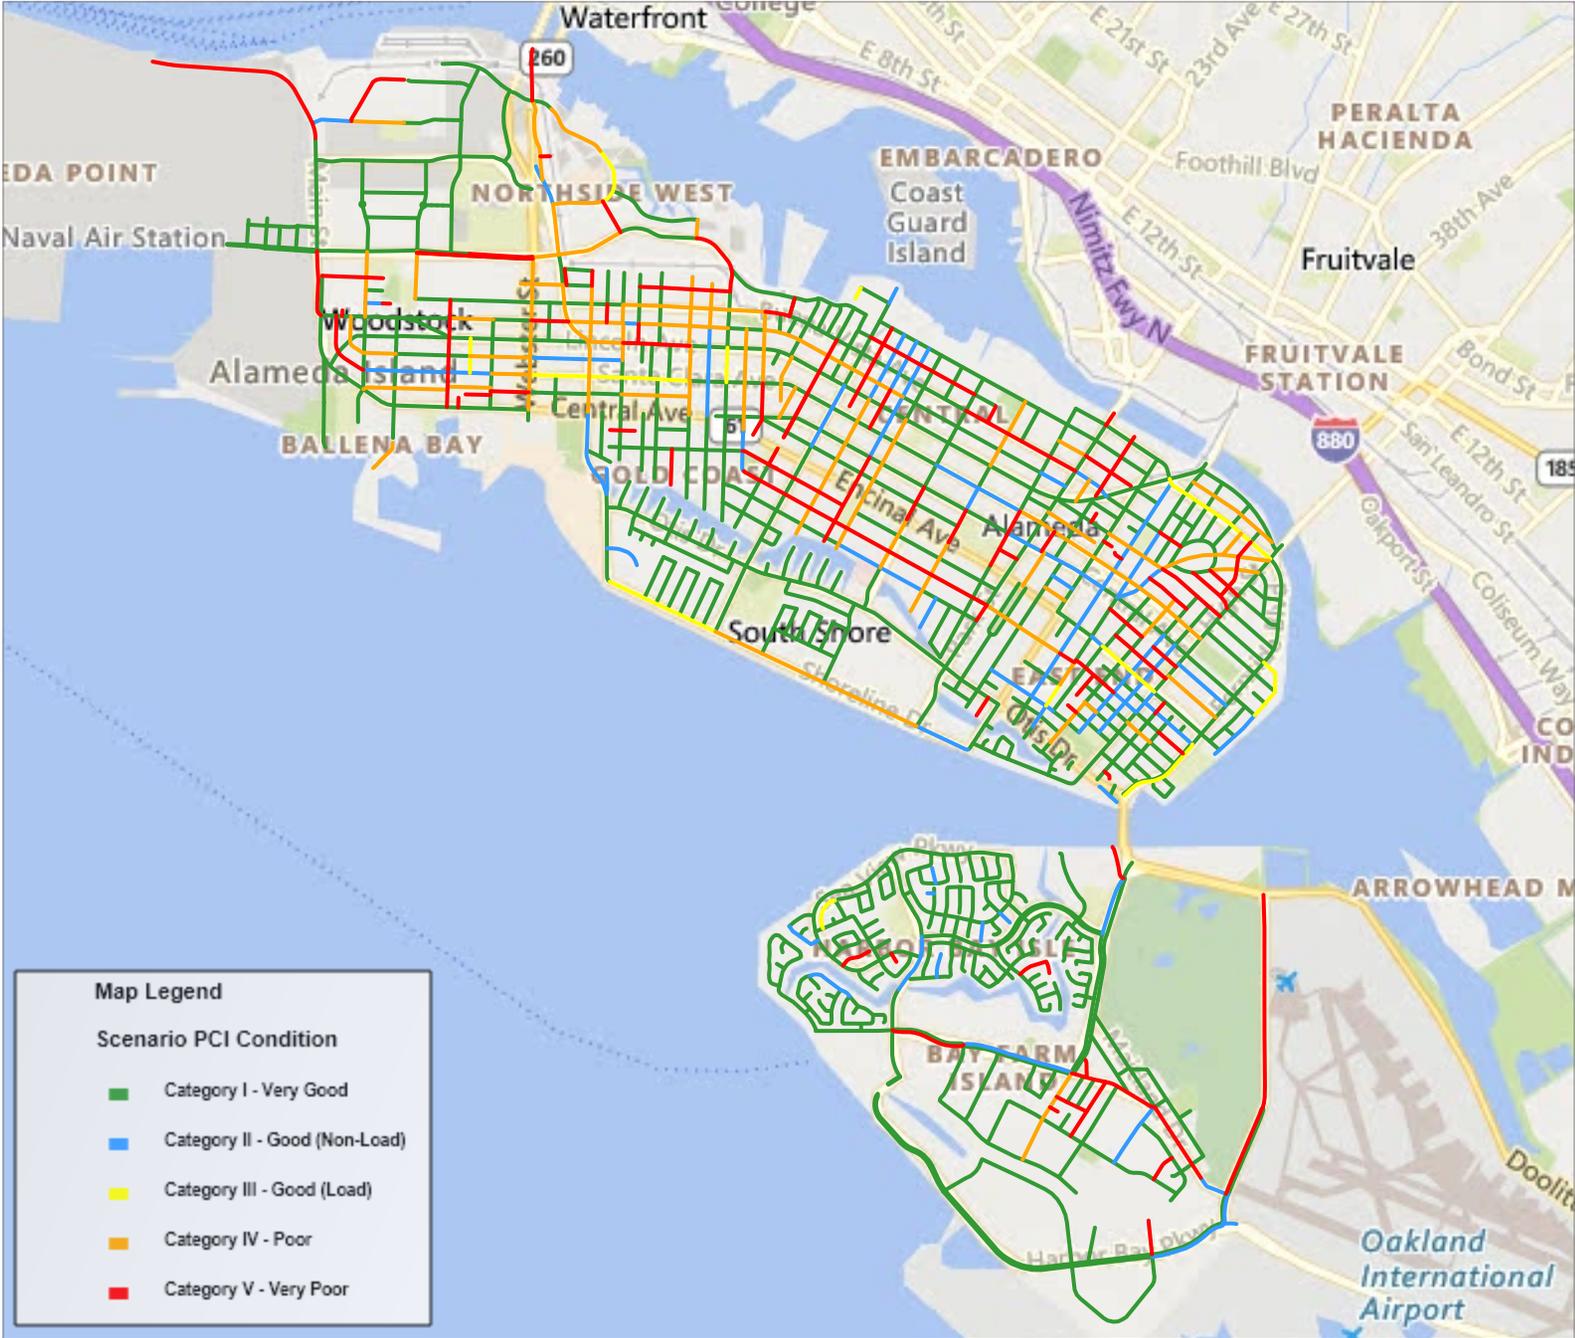

City of Alameda Public Works Dept., Alan Ta  
 950 W Mall Sq, Room 110  
 Alameda, CA 94501  
 (510) 747-7946

# Scenario PCI Condition

PTAP-23 - Scenario 2 - Funding Level - \$5.0 M/YR - 2027 Project Period - Total Rehab for 2027: \$2,927,327 - Printed: 1/25/2023

**Feature Legend**

- Category I - Very Good
- Category II - Good (Non-Load)
- Category III - Good (Load)
- Category IV - Poor
- Category V - Very Poor

**Scenario 3: Maintain PCI at 68**  
Projected Street Network Condition - 2027

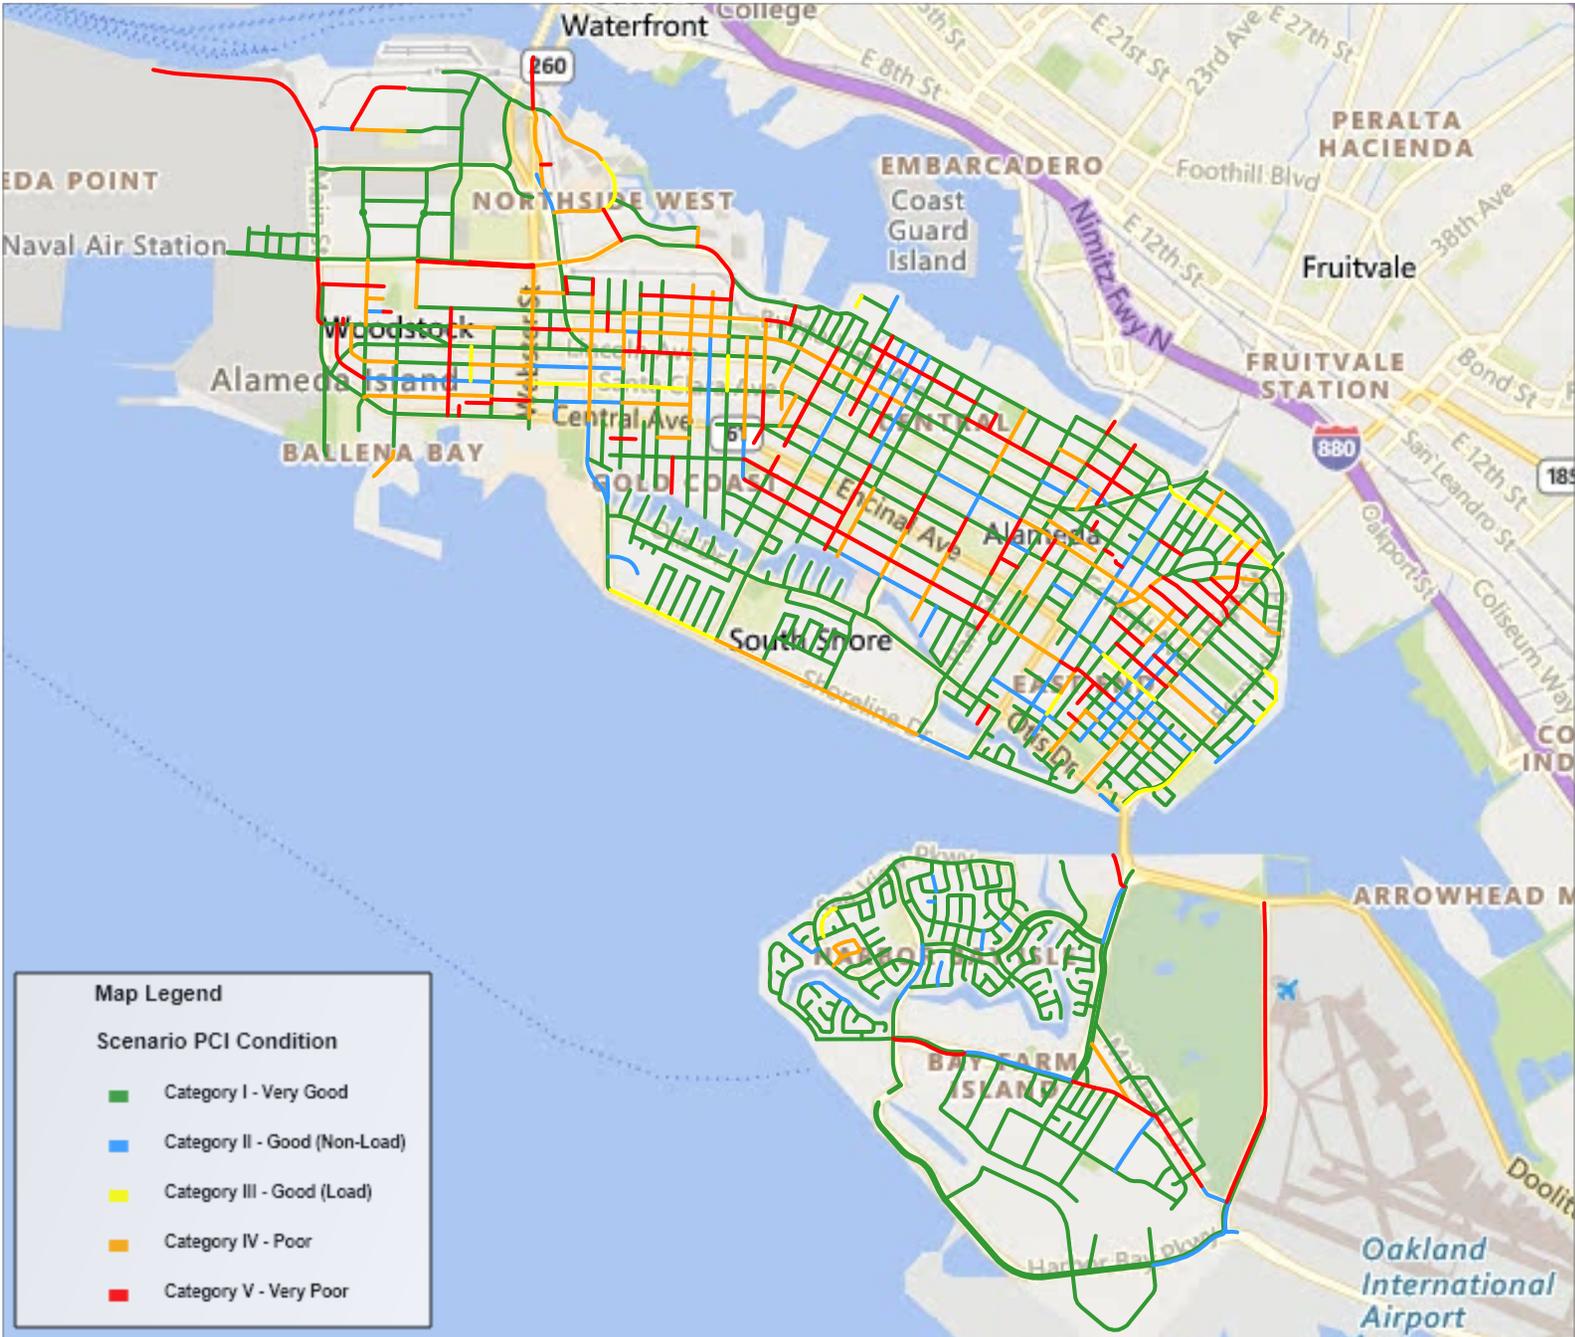

City of Alameda Public Works Dept., Alan Ta  
 950 W Mall Sq, Room 110  
 Alameda, CA 94501  
 (510) 747-7946

# Scenario PCI Condition

PTAP-23 - Scenario 3 - Maintain PCI at 68 - 2027 Project Period - Total Rehab for 2027: \$3,898,146 - Printed: 1/25/2023

**Feature Legend**

- Category I - Very Good
- Category II - Good (Non-Load)
- Category III - Good (Load)
- Category IV - Poor
- Category V - Very Poor

**Scenario 4: Improve PCI to 73**  
Projected Street Network Condition - 2027

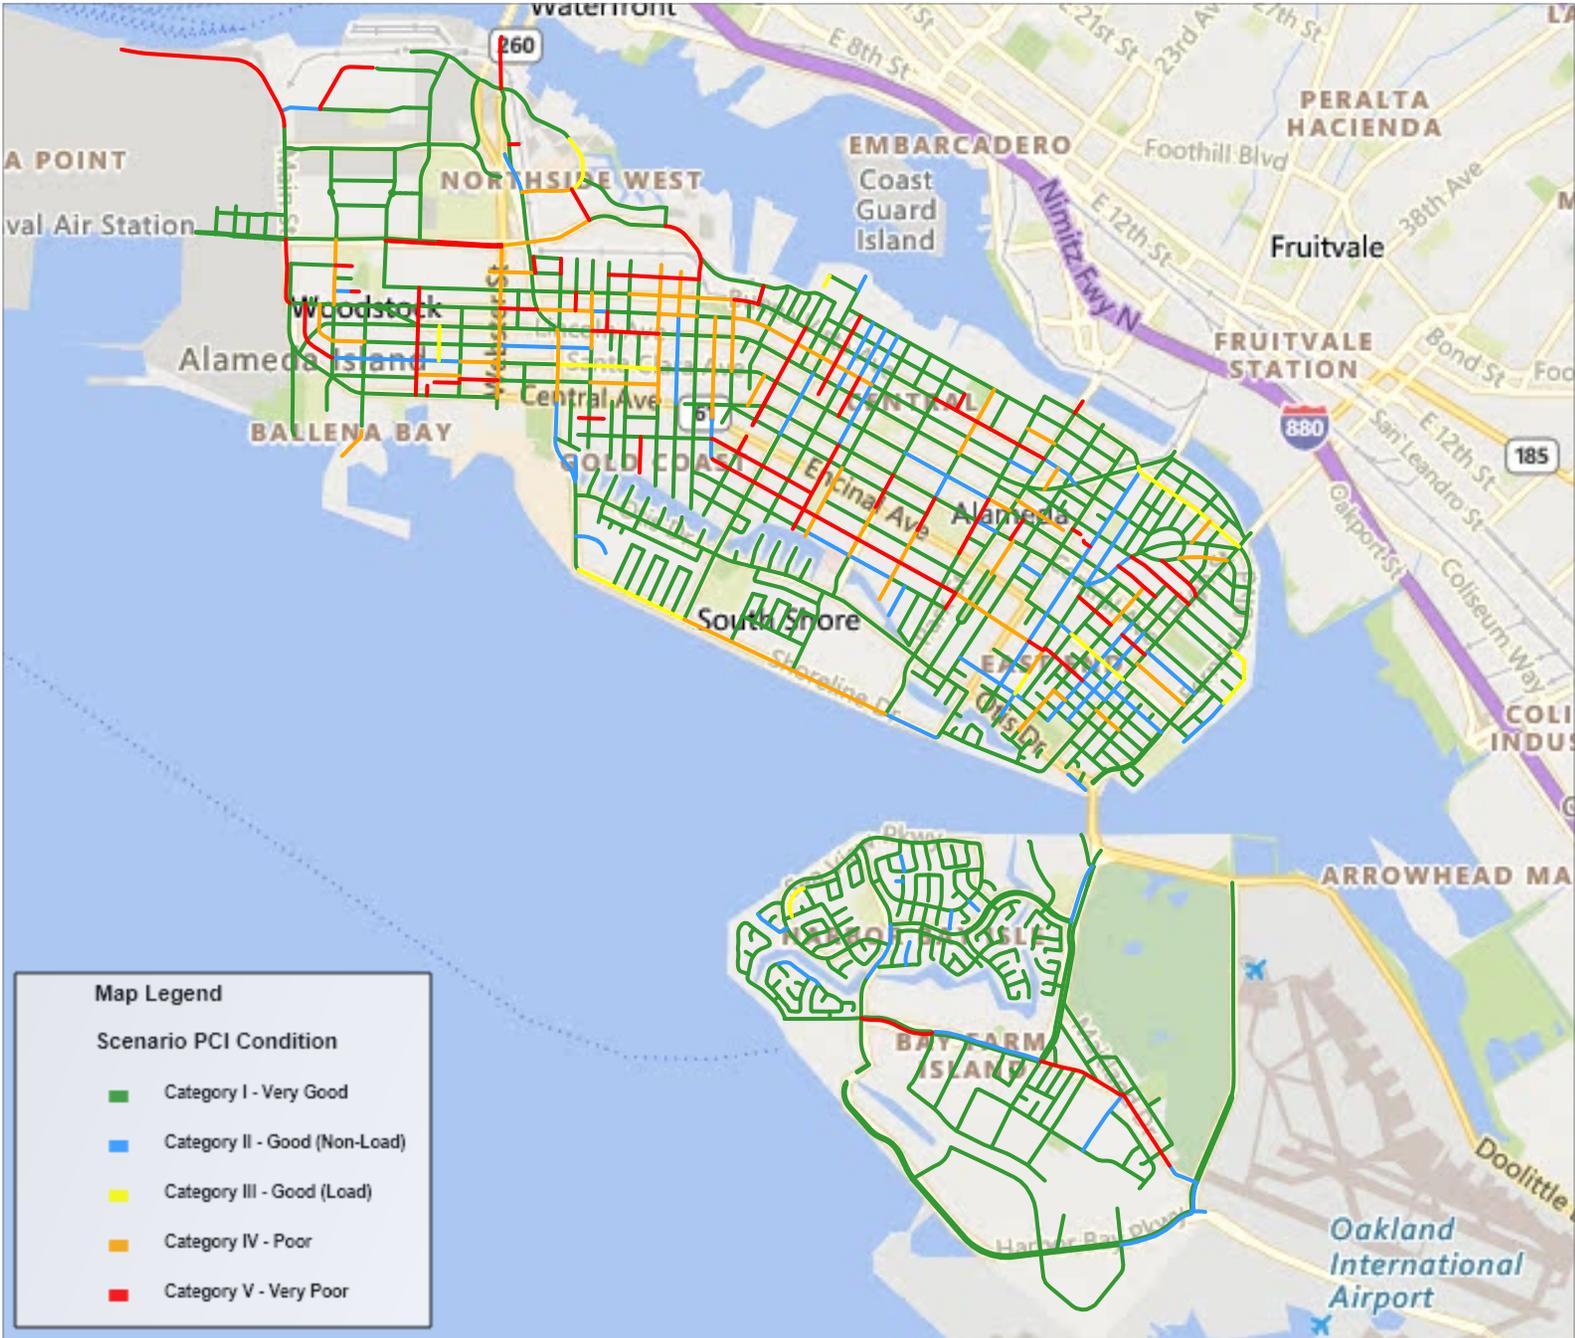

City of Alameda Public Works Dept., Alan Ta  
 950 W Mall Sq, Room 110  
 Alameda, CA 94501  
 (510) 747-7946

# Scenario PCI Condition

PTAP-23 - Scenario 4 - Improve PCI to 73 - 2027 Project Period - Total Rehab for 2027: \$7,802,334 - Printed: 1/25/2023

**Feature Legend**

- Category I - Very Good
