

My name is Gabrielle Dolphin with Alameda Progressives. On behalf of AP and other local organizations representing thousands of Alamedans who care about our community and Climate Change we propose the following for expedited consideration:

WHEREAS in September 2016 400 ppm of CO2 in the atmosphere was measured, an amount which is **irreversible** and recognized by scientists as the point of no return for catastrophic consequences of climate change, and

WHEREAS, in the face of this dubious milestone, incrementalism is not acceptable, and is tantamount to no response at all, and

WHEREAS, Alameda is poised to begin the largest two construction projects in her recent history at Alameda Point and Alameda Marina

THEREFORE be it RESOLVED:

- 1) The job description for **AMP's** next CEO will require candidates have a proven track record in Community Solar
- 2) **City building codes** will be revised to facilitate and incentivize construction of solar based commercial and residential buildings, and

BE IT FURTHER RESOLVED:

- 3) The **City of Alameda will mandate solar** on all new commercial and residential property, as well as retrofits and parking structures at Alameda Point, Alameda Marina and throughout the City of Alameda from this point forward.
