

Exhibit 1 - Truck Turning Templates

Exhibit 2 Item 6-C

Transportation Commission Meeting

July 22, 2026

Truck trailers track inside of the steering axis on turns and require wider lanes at curves.

California allows semi-tractor trailers of up to 65 feet with 40 foot kingpin to rear axle. These long trucks require minimum 14 foot lanes and overlap with parking stalls

Even shorter, more common 50 foot long semi-tractor trailers require lanes wider than 11.5 feet and necessitate the removal of on-street parking
